Message from the Guest Editor

Dear Colleagues,

No matter how smart or intelligent our transportation technologies, vehicles, roads, and infrastructure will become, it is still human users that will interact with these systems and machines. Even though humans are flexible, we still have physical, cognitive, and mental limitations on how much information and how many interfaces we can handle.

Therefore, the focus of the Special Issue is on human user and human factors considerations in transportation safety and mobility.

The topics of this Special Issue include but are not limited to:

- Vehicle safety
- Pedestrian safety
- Safety of vulnerable road users
- Safety of e-mobility users
- Personal mobility
- Mobility for underserved populations
- Inclusive mobility
- Social interactions on the road
- Human factors and advanced driver assistance systems
- [.....]
