Message from the Guest Editors

Dear Colleagues,

The world is getting warmer due to climate change. Therefore, **unprecedented changes** in all aspects of society are foreseen. On the other hand, there is uncertainty on how great such impacts will be. To tackle these challenges, this Special Issue aims to publish papers that address the impact of climate change on all areas of knowledge such as, but not limited to:

- Environment
- Buildings
- Road pavements
- Agriculture
- Indigenous peoples and local communities
- Biodiversity
- Human health
- Air quality
- Animals
- Water resources
- Oceans
- Sustainability
- Transportation
- Solid wastes
- Resilience
