### Message from the Guest Editors

The early fields of digital signal processing mainly include audio signal processing, audio compression, digital image processing, video compression, speech processing, speech recognition, and digital communication. With the rapid development of sensors and information and communication technology today, digital signal processing has played a key role in new fields such as the Internet of Things, medical industry, robotics, unmanned aerial vehicles, and Industry 4.0.

This Special Issue aims to cover a wide range of topics, including digital signal processing and its applications related to sensing in the Internet of Things, information and communication technology, robotics, unmanned aerial vehicle, medicine and nursing, industrial manufacturing, etc. Paper submissions are now welcome.
