## Dynamic Spectrum Sharing and Cognitive Radio Systems

Guest Editors:

**Prof. Dr. Masahiro Umehira**

Graduate School of Science and Engineering, Ibaraki University, Hitachi, Japan

**Prof. Dr. Takeo Fujii**

Advanced Wireless and Communication Research Center (AWCC), The University of Electro-Communications, Tokyo 182-8585, Japan

Deadline for manuscript submissions:

**closed (30 December 2021)**

### Message from the Guest Editors

Wireless communication networks suffer from capacity bottlenecks because the amount of available spectrum is fixed, while wireless traffic demands keep growing by approximately 50% a year. In addition, as everything will be connected to the network in the forthcoming IoT era, a further spectrum is required to accommodate a large number of wireless devices. This is particularly the case in the lower spectrum bands (<7 GHz) exhibiting the most favorable propagation properties, but mmWave bands are also becoming more crowded, both for terrestrial and satellite communications. Since the early days of wireless communication, a wireless spectrum has been allocated according to a static frequency plan leading to many fixed frequency bands. Fixed, exclusive spectrum allocation is further characterized by severe overprovisioning and underutilization both in time and space, hence leading to a waste of precious resources. Static frequency planning is obviously not a sustainable spectrum allocation model, leaving no room for future wireless services and new wireless actors.

Orabona n. 4, 70125 Bari, Italy

## Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

## Author Benefits

**Open Access** : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility**: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank**: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
