Message from the Guest Editors

Fiber optic sensors have been exploited for the last several decades, and there have been significant advances in energy-monitoring applications. Fiber optic sensors represent a rapidly growing research area, where challenges concerning increased sensitivity, selectivity, resolution, harsh environment, and cost reduction capability need to be thoroughly addressed.

This Special Issue aims to highlight the advancements and explore new findings that expand the possibilities of fiber-optic sensors usage in energy applications. Both original research papers and review articles describing the current state-of-the-art in this research field are welcome. This Special Issue brings out the immense diversity in every perspective of the evolution of fiber-optic sensor science and technologies.

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.
