Genetically-Encoded Fluorescent Sensors in Plants and Fungi

Guest Editors:

Dr. Roberto De Michele

Institute of Biosciences and
Bioresources, National Research
Council of Italy (CNR-IBBR), Italy

Dr. Annalisa Rizza

Sainsbury Laboratory, University
of Cambridge (SLCU), UK

Deadline for manuscript
submissions:

closed (20 February 2022)

Message from the Guest Editors

Genetically encoded sensors have revolutionized the way we measure molecules and metabolic states in vivo, non invasively and with high spatial and temporal resolutions. Recent avances in sensor design and the availability of fluorescent proteins with different spectral properties offer the possibility of monitoring several targets in real time in living cells and tissues. In plants, genetically encoded sensors are unravelling novel aspects of plant physiology and metabolism.

This Special Issue welcomes all papers related to the design and use of genetically encoded sensors in plants and fungi.

Orabona n. 4, 70125 Bari, Italy

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
