Deadline for manuscript  
submissions:

**closed (20 October 2023)**

### **Message from the Guest Editors**

Dear Colleagues,

Remote sensing provides multitude tools that can be used to monitor water qualities and ecosystem management inland waters. Recently, many new satellite sensors on satellite platforms were developed. By a combination of in situ measurements, satellite data and numerical simulations, they can provide key contributions on (bio) geophysical parameters of inland waters, as well as the inventories of surface water for current and future sensors.

This Special Issue is dedicated to highlighting the new advancement application for new satellite sensors (including ocean satellite sensors) research on inland waters with visible and thermal bands, etc. Remote sensed hydrological and biogeochemical cycles of inland waters are welcomed.

- satellite sensors applications for water color
- satellite sensors evaluation for water color
- remote sensed algorithms of water qualities
- inland aquatic vegetation mapping

## Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

## Author Benefits

**Open Access** : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility**: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank**: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
