### Message from the Guest Editor

Internet of Things (IoT) technology has the potential to revolutionize the delivery of healthcare services. The corporal detection devices in networks, together with sensors in our life environment, allow the continuous and real-time collection of an individual's health information and their related behavior. Captured in a continuous and aggregated manner, this information must be exploited effectively to allow monitoring, treatments, and interventions in real-time.

The MDPI journal *Sensors* is soliciting paper submissions, and aims to bring together researchers and application developers working on the intersection of IoT sensors in eHealth such as sensors design and development, distributed, cloud, internet, mobile, ambient, real-time, secure, and privacy-preserving computing related to eHealth. We also aim to explore the application of novel IoT computing results in eHealth.
