### Message from the Guest Editors

This Special Issue invites original research papers and review articles proposing developments in MIP-modified sensors from different basic and applied research topics, including new polymerization methods and MIP optimization, synthesis of nanoscale MIP materials as nanolayers or nanoparticles (nanogel, microgel), MIPs for new important targets in biological, environmental, food, and forensic samples (liquid, solid, semi-solid or gas samples), new sensory concepts and new sensory substrates (wearable, flexible, miniaturization, etc.), innovative sensor designs (sensor array, statistical procedures, modelling, fuzzy logic, wireless communication, etc.), novel modification procedures, etc. Research on scale-up and commercialization is also encouraged.
