### Message from the Guest Editor

Dear Colleagues,

In recent years, many researchers have developed novel sensors driven by the growth of the field of sensing technologies combined with the easier access to data acquisition, processing, and storage systems. Among other advantages, these solutions have the ability of being flexible, as they can be customized and adaptable to each specific case under study.

This Special Issue is dedicated to the dissemination of research work in this area, with a special focus on problems involving the health monitoring of different types of structures.
