### Message from the Guest Editors

The landscape of optical fiber sensing technologies is well established. However, it is continuously changing and adapting to solving new problems ranging from environmental monitoring and resource management, to applications in smart cities and heavy industries, as well as biomedical applications and biosecurity, thanks to innovations in functional materials, sensing structures and new optical phenomena. This Special Issue will focus on the latest developments in optical fiber sensing technologies, covering recent technological improvements and emerging applications. We especially encourage review articles describing the current state-of-the-art on the aforementioned topics.
