### Message from the Guest Editors

As machine learning is increasingly applied to model and predict human mobility, growing concerns are being raised about the ethical consequences of this approach on people's privacy. A major challenge thus consists in striking a subtle balance between the utility of mobility prediction services based on machine learning on one side and the privacy of individuals on the other. With a focus on mobility support, this Special Issue welcomes submissions regarding the integration between privacy, mobility sensors, data collection, the Internet of Things, and machine learning.
