Message from the Guest Editor

Future mobile networks (5G and beyond) are expected to lead to a big revolution, enabling ubiquitous and enhanced broadband services, smart/autonomous vehicles, intelligent transport, and complex human–machine interactions (e.g., extended reality), as well as the Internet of Things (IoT), which will lay the foundations of future smart cities, Industry 4.0 and e-health environments, and allow a massive number of machine-type devices to connect to the network edge.

Planning, developing and managing such a complex and massive system of devices is a hard task, and machine learning (ML) is emerging as the technology of choice. Indeed, ML techniques can achieve outstanding performances for wireless communication applications thanks to their online learning and optimization capabilities. ML methods decrease the complexity of algorithm computations, enabled by data learning and interactions with the environment. Hence, they accelerate the convergence in finding sub-optimal solutions compared to conventional optimization techniques.

This Special Issue is addressed to all the types of ML-based algorithms enabling intelligent mobile network management and optimization.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria
Elettrica e dell'Informazione
(Department of Electrical and
Information Engineering),
Politecnico di Bari, Via Edoardo
Orabona n. 4, 70125 Bari, Italy

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
