This Special Issue on "Remote Sensing applications in coastal areas" aims at collecting high quality papers that focus on satellite-based applications for regional/local scale monitoring of coastal environment. Hence, it will include, but will not be limited to, the following topics:

- Original methods and algorithms for water constituent (chlorophyll, suspended matter, etc.) retrieval;
- Continental shelf and estuarine ecosystems studies based on remote sensing observations;
- Integration of multi-source (in-situ, UAV, airborne and satellite) data for damage assessment in coastal areas;
- Techniques for assessing water quality variability in the coastal zone;
- Multi-mission remote sensing data integration.
