Message from the Guest Editors

Dear Colleagues,

Single-photon counting imaging sensors such as the ubiquitous all solid-state single-photon counting avalanche diode (SPAD) detectors can measure single-photon events. This image sensor field is developing rapidly as new applications emerge. Imaging systems based on scanning single sensors or sensor arrays achieve ever-higher resolution concerning space, time, and quantum efficiency in different spectral ranges (e.g., ultraviolet, visible, infrared). This fundamental platform technology opens up the development of new imaging methods and applications in science and industry. This Special Issue contains articles discussing various single-photon counting imaging sensor technologies and selected new applications.

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
