### Message from the Guest Editor

One of the main priorities of modern engineering is to increase the reliability and safety of technical equipment in operational use. Therefore, this approach facilitates the development of monitoring of the technical conditions of aircraft, vehicles and transport systems. There is therefore intensive developments of both the construction of sensors, their integration and algorithms allowing for the maximum exploitation of the collected data.

This Special Issue aims to cover all types of sensors as well as algorithms for the condition monitoring of aircraft, vehicles and transport systems .
