Message from the Guest Editor

Dear Colleagues,

Novel ideas about attitude sensors, new methods to increase the measurement accuracy of the sun, stars or horizon attitude sensors, new algorithms to increase the robustness of star-identification, extraction of meaningful information from degraded sensors, or from those with poor knowledge of sensor parameters, more accurate or faster star centroid algorithms, or new methods of post-flight recalibration new methods. These is an incomplete list of subjects this Special Issue is particularly interested in.

Contributions to the theory of attitude estimation (single-point or filtered) are also of great interest. This involves, for instance, new, more accurate, and/or faster filtering techniques, state and parameter estimation, estimation using dual quaternions and multiplicative approaches. New filtering to estimate attitude and attitude rate provides another example of a subject this Special Issue is particularly interested in.

Finally, surveys with comparisons on different data-processing techniques as well as on attitude estimation methods providing rational summary of competing approaches are also of great interest.

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
