Attitude Sensors

Guest Editor:

Prof. Dr. Daniele Mortari

Department of Aerospace Engineering, Texas A&M University, College Station, TX, USA

Deadline for manuscript submissions:

closed (30 September 2020)

Message from the Guest Editor

Dear Colleagues,

Attitude, that is, the knowledge of the pointing orientation in space, is the most important information for any space vehicle. The performance of space communication, observation, and navigation systems all strongly depend on how fast, reliably, and optimal the attitude information is estimated to be. This estimation comes from attitude sensors through two subsequent processes: (1) sensor data processing and (2) attitude estimation. These are the two tracks of this Special Issue on "Attitude Sensors".

Track I: Sensor data processing. This track is particularly interested in novel ideas of attitude sensors and new approaches to increase measurement accuracy and robustness as, for instance, techniques to perform staridentification with poor knowledge of star tracker parameters and autonomous recalibration.

Track II: Attitude Estimation. This track welcomes new contributions related to both single-point and filtered attitude determination techniques. This involves, for instance, the use of dual quaternions or SVD filtering to estimate attitude and attitude rate.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases. **Journal Rank:** JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
