Full-Field Optical Measurement Techniques for Damage Assessment

Guest Editors:

Prof. Dr. Steve Vanlanduit

InViLab Research Group, Faculty of Applied Engineering, University of Antwerp, Groenenborgerlaan 171, 2020 Antwerp, Belgium

Prof. Dr. Theodore E. Matikas

Mechanics, Smart Sensors & Nondestructive Evaluation Laboratory, Department of Materials Science and Engineering, School of Engineering, University of Ioannina, 45110 Ioannina, Greece

Deadline for manuscript submissions:

closed (31 May 2020)

Message from the Guest Editors

Dear Colleagues,

The ability to detect damage to components or infrastructure at an early stage is essential in many application fields, including aeronautics, wind turbines, bridges, etc.

Full-field vibration measurement techniques like laser vibrometry, holography, shearography or digital image correlation are used to detect, locate and quantify damage through the high spatial resolution measurement data they deliver. These methods are used to detect cracks, delaminations and wear in several types of materials. Camera-based techniques like infrared thermography and non-destructive testing are also used to detect other types of damage like corrosion, coating degradation, etc.

The aim of this Special Issue is to provide an overview of the state-of-the-art of the capabilities and limitations of optical measurement techniques for damage detection.

Both review articles and papers relating to the application of full-field optical measurement techniques for damage detection and/or damage assessment are solicited. Papers on innovative optical measurement techniques, optimized measurement set-ups, pre- and post-processing methods and novel detection techniques are also welcome.

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
