### Message from the Guest Editors

Dear Colleagues,

In this Special Issue, we welcome original and review submissions reporting on the development of such novel fluorescent sensors made of both chemical and biological origins (i.e., chemically synthesized or protein-based probes for environmental, biological, and clinical samples) to specifically detect small amounts of substances as well as its change in a complex milieu.

Reports for sensors with a sufficient novelty and practical utility will be highly favored. However, preliminary reports with exceptionally intriguing ideas will also be welcome, as far as they are technically sound. As a protein engineer and an organic chemist working in analytical chemistry field, we welcome submissions from a range of sensor specialists.

- fluorescent biosensor
- fluorescent dye
- fluorescent protein
- immunosensor/fluorescence quenching
- diagnostic sensors
- fluorescent molecular imaging
- fluorogenic sensors
