Message from the Guest Editors

Dear Colleagues,

Monitoring and forecasting water dynamics are fundamental tools for managing aquatic systems and improving our knowledge of their processes. In the last decade, the availability of data from remote sensing of satellites, such as the Copernicus constellation and the DIAS platforms, on-board plane cameras, and onsite low-cost cameras, has promoted the development of multiple monitoring and forecasting systems for water applications.

This Special Issue will bring together innovative works related to “Remote Sensing for Forecasting and Monitoring Aquatic Systems”, addressing several key issues that include but are not limited to the following:

- Remote sensing from satellites, plane or UAVs, and onsite cameras for water systems dynamics
- Integrated forecast tools using remote sensing
- WebGIS platforms for remote sensing-based monitoring and forecasting
- Data fusion for satellite, in-situ, and camera data

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q1 (Instrumentation)
