### Message from the Guest Editor

The design and development of molecular imaging probes are related to the novel biomarkers that will help and improve the early diagnosis and staging of several deadly diseases, including cancer. Significantly, the sensor or responsive units that selectively recognize the molecule of interest in deep tissue incorporated imaging probes often provide invaluable information about the disease progression and stages.

Therefore, this Special Issue is addressed in the design, development, and applications of sensors or responsive unit(s)-incorporated molecular imaging probes.
