### Message from the Guest Editors

Healthy ageing should be an aim in modern society. Following the increase in life expectancy due to improvements in medicine and technology, the prevalence of age-related disorders is increasing. Further, such conditions are appearing earlier in life, even in adolescence, introducing disturbances into gait, posture, and general daily activities. These disorders can appear in individuals with a previously diagnosed musculoskeletal lesion as well as in able-bodied persons. Thus, there is a disparity between increases in life expectancy and wellbeing.
