## Surface Plasmon Sensors

Guest Editors:

**Dr. Atsushi Motogaito**

Division of Electrical and  
Electronic Engineering, Graduate  
School of Engineering, Mie  
University, Mie, Japan

**Prof. Dr. Elba Mauriz**

1. Department of Nursing and  
Physiotherapy, University of  
León, 24071 León, Spain  
2. Institute of Food Science and  
Technology (ICTAL), La Serna 58,  
24007 León, Spain

Deadline for manuscript  
submissions:

**closed (31 July 2022)**

### Message from the Guest Editors

In recent years, basic and applied research on surface plasmon resonance (SPR) has been actively conducted. In particular, the SPR sensor is one of the devices that has been actively investigated in applied research of an optical platform using the propagation of surface plasmon polaritons. The utilization of nanostructures has enabled the development of more sensitive detection formats adapted to multiplexed configurations. Specifically, the unique optical and electronic properties of nanomaterials have permitted the advancement of localized surface plasmon resonance (LSPR) and surface-enhanced raman scattering (SERS) applications. Likewise, the fabrication of nanopatterned structures through lithographic patterning has provided high spatial resolution surface structures while improving the sensitivity of the systems. In this Special Issue, we would like to compile the latest research results on the theory and experiments regarding the measurement principle, detection formats, performances, and applications for surface plasmon sensors, and to discuss the current status and future prospects of surface plasmon sensor performance.

## Editor-in-Chief

### **Prof. Dr. Vittorio M. N. Passaro**

Dipartimento di Ingegneria  
Elettrica e dell'Informazione  
(Department of Electrical and  
Information Engineering),  
Politecnico di Bari, Via Edoardo  
Orabona n. 4, 70125 Bari, Italy

## Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

## Author Benefits

**Open Access** : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility**: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank**: JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
