

## Special Issue

# Sensors for Cultural Heritage Monitoring

### Message from the Guest Editors

Methods of measurement, diagnostics and the monitoring of cultural heritage objects are becoming more and more necessary. The data obtained is used to make the right decisions related to conservation interventions and daily treatment. In the case of repeated measurements, the development of a spatial data integration solution is required, as well as a quantitative and qualitative analysis over time. An important aspect is also the visualization of results presenting key information in a readable way for the inexperienced user. Modern sensors for cultural heritage integrate physical measurement methods and advanced data processing algorithms. Submitted papers can address the development of single or multimodal measurement techniques, the analysis of data from sensors, aspects of diagnostics and the monitoring of specific objects or groups of objects. We especially encourage submissions that include demonstrations of actual applications in the field or prototypes that resemble a realistic scenario.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
