

## Current Status and Prospects of Extraction and Separation Technology of Mixed Rare Earth Elements

Guest Editor:

### Dr. Artem Gelis

Department of Chemistry and  
Biochemistry, Radiochemistry  
Program, University of Nevada,  
Las Vegas, NV 89101, USA

Deadline for manuscript  
submissions:

**closed (15 February 2022)**

### Message from the Guest Editor

The role of rare earth elements (REE) in modern life and their use in the chemical industry have increased at a strikingly fast pace over the last three decades. Numerous applications, including the fabrication of magnets, superconductors, catalysts, and batteries, has caused a significant spike in the demand for REE. More recently, an increase of the use of radioactive isotopes of REE for medicinal applications as novel cancer treatments and imaging agents, namely  $^{44,47}\text{Sc}$ ,  $^{90}\text{Y}$ ,  $^{177}\text{Lu}$ , and others, has resulted in a rigorous search for novel and efficient separation technologies. These technologies utilize varying methodologies to achieve separation of individual rare earth elements that are very similar in nature.

This Special Issue will focus on the development and applications of state-of-the-art technologies and methods for separating rare earth elements, including but not limited to solvent extraction, ion exchange, chromatography, and electrochemistry. The kinetics of the mass transfer processes through the interface will be of interest. Precedence will be given to unique and novel approaches as well as the most recent developments in the field.

an Open Access Journal by MDPI

## Editor-in-Chief

**Prof. Dr. Frank L. Dorman**

Department of Chemistry,  
Dartmouth College, Hanover, NH  
03755, USA

## Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

**Rapid Publication:** manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
