Tokyo, Tokyo, Japan

Deadline for manuscript
submissions:

closed (31 January 2018)

Message from the Guest Editor

Dear Colleagues,

Clarification of biological phenomena relies on powerful analytical methods that can cope with quantitative or qualitative analysis of a large number of endogenous compounds in very different and complex matrices. Separation is considered one of the most important analytical methods. Chromatographic methods, especially HPLC, appear to be the most common because the techniques allow for the separation of quite complicated mixtures of analytes.

In this Special issue, the contribution of original research and review articles regarding separation techniques and analytical methods with high sensitivity and selectivity, which are applied to biological fluids, are welcome.

Dr. Makoto Tsunoda

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
