submissions:

closed (28 February 2021)

Message from the Guest Editor

Dear Colleagues,

Consumers' concern about the safety and healthiness of food and ensuring compliance with trade laws has increased, in recent years, the importance of the use and development of new analytical techniques in food science. Faster and accurate techniques are essential to provide information about processing, quality control, adulteration, contamination, chemical composition, and traceability of food.

The target of this Special Issue is to present original, simple, and efficient analytical methods for food sample preparation and preconcentration and for sample analysis, including method development, optimization, and validation combining chromatography techniques with robust, sensitive, and selective systems of detection.

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
