Message from the Guest Editor

Dear Colleagues,

Capillary electrophoresis (CE) was shown to be a major analytical separation technique for the analysis of both small and large (polymers, proteins, etc.) molecules, where its performance is often better or complementary to other liquid chromatography techniques. Different modes of CE exist (CZE, FACE, ACE, ITP, etc.) and each one allows scientists not only to separate and quantify the analytes but also to quantify other physico-chemical parameters such as association constants, effective charge, etc.

The scope of this Special Issue is broad and includes all aspects of capillary electrophoresis. It aims to present the most significant and recent applications of CE.

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Chromatography*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
