Deadline for manuscript
submissions:

closed (31 October 2020)

Message from the Guest Editor

Dear Colleagues,

In many industrial processes, the initial phase of preparing a product requires the application of extraction techniques to isolate the extractable material contained in the most varied matrices. Therefore, innovative research into extraction techniques, particularly green ones, for the isolation and characterization of bioactive compounds from different matrices for the formulation of food rather than nutraceuticals, supplements, cosmetics and so on, are of great interest. Furthermore, for the identification of bioactive compounds chromatographic techniques are used that include traditional detectors, such as UV/Vis, but also more advanced methods based on mass spectrometry and NMR.

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
