Message from the Guest Editor

Dear Colleagues,

Solid phase microextraction (SPME) has been popular since it was first introduced in the 1990s. In recent years, there has been a huge advancement in the preparation of novel fiber coatings; these advances have improved the efficiency and selectivity of those coatings and have expanded the range of analytes extracted. The applications of SPME continue to grow. In particular, the coupling of SPME with a wide range of chromatographic techniques is now routine and well-established.

This Special Issue aims to present readers with the latest research regarding SPME. The issue invites contributions relating, but not limited, to fiber design and coating technology, SPME hyphenated techniques, and the application of SMPE to a range of applications.

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Chromatography*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.6 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2023).
