Deadline for manuscript submissions:

closed (30 June 2022)

Message from the Guest Editor

Dear colleague,

This Special Issue is on environmentally data-driven smart sustainable cities. This evolving paradigm of urbanism has materialized in the light of the recent advances in data-driven technology solutions for energy efficiency, pollution reduction, as well as urban analytics in relation to environmental planning and climate change policy. These developments are primarily intended to improve and advance the performance of both smart cities and sustainable cities with respect to their contribution to environmental sustainability in the face of the escalating trend of urbanization.

We encourage researchers, academics, practitioners, scientists, and futurists to submit original research articles, case studies, reviews, theoretical frameworks, methodological frameworks, critical perspectives, and viewpoint and discussion papers.

Innovation Systems, University of
Salerno, 84084 Salerno, Italy

Message from the Editor-in-Chief

Smart Cities provides an advanced forum for the dissemination of information on the science and technology of smart cities. It publishes reviews, regular research papers (articles) and communications in all areas of research concerning smart cities. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers so that the full experimental results can be reproduced. Manuscripts regarding research proposals and research ideas are particularly welcome.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Inspec](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q1 (Engineering, Electrical and Electronic) / CiteScore - Q1 (Urban Studies)
