Deadline for manuscript
submissions:

30 April 2025

Message from the Guest Editors

In the period of civilization 5.0, the educational institution of universities exist. It is believed that systems of the social and virtual worlds would be able to close any gaps and address any problems throughout the Society 5.0 timeframe. In order to actualize or prepare for era society 5.0 in the domain of education, students need to be able to think critically, constructively, and creatively, as well as having an appropriate understanding of their learning styles. Being intelligent and well-integrated with both the real and digital worlds, civilization 5.0 is a society. Society 5.0 has the following characteristics: (1) complete adoption of ICT; (2) community focus; (3) engagement of people; (4) shared ideals of sustainability, inclusiveness, effectiveness, and intellectual power; and (5) development of economic disruption. Higher education institutions are essential to sustainability. Higher Education 4.0 is the term used to describe the change brought about by Industry 4.0 in higher education and instructional approaches (called an Education or Edu 4.0). The rising need for a more sustainable society has had a substantial influence on higher education.

an Open Access Journal by MDPI
