Message from the Guest Editor

Organic solid waste (OSW) refers to solid waste containing organic matter, e.g., domestic waste, agricultural waste, industrial waste, etc. Traditional disposal methods include landfill and incineration, but these methods have problems with environmental pollution and resource waste. There will also be a lot of excess carbon dioxide emissions, which will have a huge impact on global warming and climate change.

The organic solid waste thermochemical conversion process is a technology that converts OSW into renewable energy or high-value chemicals through a thermochemical reaction. Through the application of high temperatures and catalysts, the OSW is decomposed into gas, liquid, and solid products to achieve efficient utilization of resources and harmless treatment of waste.

The utilization of OSW not only contributes to reducing pollution but also provides an alternative way of generating bio-energy and environmentally friendly products. This Special Issue aims to attract works of scientific interest to promote the conversion and utilization of OSW.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
