

Seepage and Erosion in Soils and Rocks: Challenges for Environmental Sustainability and Sustainable Geotechnical Engineering

Guest Editors:

Dr. Yao Tang

College of Civil Engineering and Architecture, Zhejiang University, Hangzhou 310058, China

Dr. Yingtao Hu

Department of Civil Engineering, Hangzhou City University, Hangzhou 310015, China

Deadline for manuscript submissions:

closed (30 April 2025)

Message from the Guest Editors

Soil–water interactions and related soil erosion are crucial subjects and mechanisms in the failure of geo-infrastructure. This interaction encompasses various processes, such as seepage in pores and fractures, the migration and clogging of fines in soils, post-erosion behavior, erosion caused by overflow, and contaminant transport in porous and fractured media, which are important for geotechnical engineering as well as other related fields, such as environmental protection and energy exploitation. Mitigating water-induced geotechnical failures is vital for ensuring the sustainability of these engineering practices.

Original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Seepage in porous and fractured media
- Internal erosion in soils/rocks
- Post-erosion behavior of soils/rocks
- Interactions between porous and fractures media
- Contaminant transport in porous and fractured media
- Monitoring of water–soil/rock interactions in the field
- Challenges and mitigation strategies for soil erosion in sustainable geotechnical engineering.
- Case studies regarding water-induced geotechnical engineering problems

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
