Deadline for manuscript submissions:

closed (10 June 2024)

Message from the Guest Editors

Under the goal of carbon neutralization, many countries are upgrading their power systems. More and more new energies are being connected to the grids. Location, sizing, and operation of the energy storage systems are key issues of sustainable development. Power system design with multi-link energy storage is a new problem. This Special Issue focuses on multi-values of energy storage, among which the coordinate planning and operation, the business model, the profit distribution, the carbon benefits, etc., are especially of interest.

The main topics include, but are not limited to:

Modeling and planning of energy storage systems; Energy storage participates in the optimization of power grid regulation; Energy storage participates in market operation strategy optimization; Differentiated configuration of energy storage; Research on interaction between energy storage and new energy generation; Joint expansion planning of electric energy storage and other energy networks; Novel market mechanism and business model caused by energy storage; Carbon dioxide emission reduction using variety kinds of energy storage.

an Open Access Journal by MDPI

Prof. Dr. Marc A. Rosen

Faculty of Engineering and
Applied Science, University of
Ontario Institute of Technology,
Oshawa, ON L1G 0C5, Canada

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
