Message from the Guest Editors

The sustainability of the construction field involves numerous aspects related to the durability and the contamination of building materials as well as the life cycle and the environmental impacts. The reuse/recycling of materials in the civil engineering and building sectors became an important concern in recent decades. The enormous production of inert material waste during construction, such as for instance tunnel break aggregates or excavation as well as the demolition of built infrastructures triggers new findings and possibilities to recycle the mass. Many types of inert waste are considered in the building sector, such as recycled concrete aggregates, milled asphalt granulates, quarry debris, cementitious dusts, various type of ashes or alternative cementitious binder in substitution of Portland cement. The issue addresses researchers as well as construction companies, engineers, architects and specialists that deal with durability and recycled or re-used construction materials. The scope would be to gather the actual and most recent developments and knowledge related to the recycling and the mechanical as well as the durability properties of these new material mixes.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
