submissions:

closed (3 November 2023)

Message from the Guest Editors

The Structural Health Monitoring of Buildings and, in general, of artifacts, has had an exponential growth in recent years. Nowadays we have the possibility of continuous monitoring of the static and dynamic behavior of structures. This is thanks to the development of all the sectors involved, from point and area sensors, to terrestrial, aerial and satellite survey techniques, to wireless and real-time data transmission systems, to modeling techniques and new materials. This special issue aims to acquire contributions to better understand the state of the art on the matter, with a particular eye on geomatic techniques and new sensors for the acquisition of geometric and physical data, as well as data transmission and sharing techniques and their processing and use.

- Geomatics;
- GNSS;
- Sensor technology and wireless systems;
- IoT-based sensors;
- Wireless Sensor Networks;
- Sensor-fusion approaches;
- Drone-based monitoring;
- BIM and HBIM;

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
