### **Message from the Guest Editors**

Dear Colleagues,

The concept of smart cities represents a comprehensive approach to the functioning of urban regions and affects various social areas such as culture, infrastructure, the environment, energy, and social services.

In this Special Issue, we aim to publish innovative multidisciplinary work on current trends and perspectives in strategic management, innovation implementation, working models, and best practices that could improve the environment, the economy, and social well-being in smart cities and territories. We are particularly interested in advances in governance models, simulation methods and data analysis, forecasting techniques, scenario planning, future designs, and complex system models that could contribute to improving critical thinking and decision-making in urban and territorial resilience and sustainable development.
