### Message from the Guest Editors

Dear Colleagues,

Within an increasing global population, especially in cities, the demand for construction and building materials has also increased significantly. This increase has in turn resulted in a significant growth in the utilization of natural resources. Ordinary Portland cement (OPC) is typically the material used in the greatest amount in construction due to its wide availability and attractive durability and strength properties. However, significant opportunities for improvement of OPC-based concretes exist, which can provide lower carbon dioxide emissions and better durability behavior. These alternative cementitious materials, such as calcium sulfoaluminate cements, calcium aluminate cements, and alkali-activated materials, may provide opportunities for sustainable development through minimizing the usage of natural resources and result in more sustainable construction materials...

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
