Message from the Guest Editors

Dear Colleagues,

Antibiotic resistance, encoded by antibiotic resistance genes (ARGs), is the ability of some bacteria survive antibiotic treatment. Soil and water environments becoming reservoirs of antibiotic resistance caused by clinically and agriculturally overuse of antibiotics. In particular, wastewater and animal manure have been recognized as the reservoirs for the dissemination of ARGs in environments. The discharge of treated wastewater from wastewater treatment plants and the wastewater irrigation can introduce ARGs to receiving environments. Land application of manure and sewage sludge in agricultural practice can introduce ARGs to the receiving soil and natural water body. Therefore, management practices in a manner that can potentially stem the spread of ARGs in the environment were needed.

The scope of this Special Issue is to collect original articles to update knowledge on fate of ARGs in environments and to seek potential management practices for reducing the dissemination of ARGs.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. Sustainability publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
