

Modeling Connected and Automated Vehicles (CAVs) for Sustainable and Intelligent Transportation Systems

Guest Editors:

Dr. Jun Liu

Prof. Dr. Steven Jones

Dr. Wei Zhao

Message from the Guest Editors

Connected and automated vehicles (CAVs) are quickly becoming a reality. CAVs are expected to be capable of communicating with other road users (e.g., other vehicles, pedestrians, and bicyclists) and infrastructures (e.g., traffic signals) and will eventually be operated on the road without any intervention or control by human beings.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
