Message from the Guest Editor

Dear Colleagues,

Water has become one of the most limiting resources for crop production. The water footprint is an indicator that covers both direct and indirect water use in products or production processes. Research on water footprints of different cropping systems not only informs further improvements in water use efficiency and water productivity but also facilitates sustainable cropping industries. This Special Issue of *Sustainability* is intended to serve as a platform for sharing research findings and insights into the water footprint for sustainable crop management.

Contributions of either theoretical or empirical research are welcomed. Contributions on other topics, but that are closely related to sustainable crop management and water footprints are also of interest.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
