Deadline for manuscript  
submissions:

**closed (31 December 2021)**

### Message from the Guest Editors

Centralized wastewater collection and treatment systems are energy-intensive and costly processes to maintain. Such systems require high investment costs upfront in long-distance wastewater collection systems, which also incur high operation and maintenance expenses and suffer from high water losses and environmental and human health impacts. Several sources in literature are pointing toward a shift from conventional, centralized water services to alternative strategies involving more decentralized reuse, resource efficiency, energy and nutrient recovery, and the flexibility to effectively manage emerging contaminants. This Special Issue aims to address state-of-the-art findings on resource-recovery-based decentralized wastewater services, which address the demands of a reliable technology, economic feasibility, and environmental benefits, as well as transitioning into more sustainable services.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
