Message from the Guest Editors

Dear Colleagues,

While urban areas around the world differ in terms of size, built-up area, population density, urban morphology, and growth intensity, the global character of their exposure to extreme weather events attributed to climate change is evident. This calls for the development of concerted and systematic approaches to climate-resilient urban management and growth that could globally benefit urban areas. Cities today are therefore in need of new technologies, applications, and planning methods that can exploit the full potential data to interpret complex spatiotemporal climatic phenomena and support more informed decision making.

- Development of methodologies and tools to detect, predict, and mitigate urban-level challenges;
- Evidence-based methodologies integrated into urban planning processes;
- Interactive climate data mining;
- Exemplary cases of demonstration projects and response strategies to ameliorate urban-level challenges;

We look forward to receiving your contributions.

Dr. Milena Vuckovic

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
