

Energy Conversion Performance for Sustainable Development

Guest Editors:

Dr. José Ángel Sánchez-Fernández

Department of Hydraulic, Energy and Environmental Engineering, Universidad Politécnica de Madrid, Madrid, Spain, 28006 Madrid, Spain

Prof. Dr. Carlos Platero

Department of Automatic Control, Electrical and Electronic Engineering and Industrial Informatics, Universidad Politécnica de Madrid, 28006 Madrid, Spain

Deadline for manuscript submissions:

closed (12 December 2021)

Message from the Guest Editors

Energy usage and fresh water availability are two global concerns associated with climate change. In fact, two of the United Nations Sustainable Development Goals (SDGs) are dedicated to them: Goal 6 (Clean water and sanitation) and Goal 7 (Affordable and clean energy). In the field of energy conversion, these two concerns are related because water is working fluid in the main thermodynamic cycles used for energy generation and consumption. For this reason, any enhancement in energy conversion performance contributes to solve both concerns.

As it is known, energy conversion efficiency has theoretical limits that depend on the process involved in the conversion. However, there are many processes where technology can be improved. These improvements can provide higher efficiency, less cost, less materials use, or devices that are more robust. In summary, these innovations enhance the performance of an energy conversion process. Through these enhancements, the scientific community can contribute to UN Sustainable Development Goal 7. The purpose of this issue is to contribute to this aim by publishing research or review papers on the topics.

an Open Access Journal by MDPI

Applied Science, University of
Ontario Institute of Technology,
Oshawa, ON L1G 0C5, Canada

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
