closed (31 October 2020)

Message from the Guest Editor

This special edition develops views on environmental and sustainable development from the perspective of research in the management accounting field. This Special Issue has the following focus, scope and purpose:

Focus: The connection between environmental issues and management accounting in terms of the internal and external influence and measurement is an area under development. In addition, the development of a more ecological economic view in line with business and society's agenda for sustainable development.

Scope: Of particular interest are papers touching on the following areas: any empirical papers in organizational contexts looking at economic, environmental and ecological developments; conceptual papers providing analysis of economic concepts from a more ecological perspective; any papers tackling pedagogical issues in the area of environmental management accounting and sustainable development.

Purpose: To further develop EMA in terms of discourse on issues that are still very open and opaque, including: organizational control (EMA) and environmental output control; the measurement of EMA factors; and economic and environmental accounting tensions.
