Message from the Guest Editors

Dear Colleagues,

Gamification can be viewed as an educational innovation strategy. In recent years, it has been adopted by thousands of innovative teachers, who wish to increase their students' motivation for learning. Gamification can be designed and developed in different virtual and/or face-to-face environments. It can be applied while learning is taking place in the classroom, as well as outside the classroom, with gamified reinforcement activities. Combining it with other innovative methodologies, such as the flipped classroom, is also an excellent strategy.

In a broader view of the application of gamification in developing science, technology, engineering, art, and math (STEAM) skills, educational gamification can be a valuable strategy to enable students to learn to take care of the environment.

This Special Issue, entitled "Sustainability in Educational Gamification", aims to publish research and revised articles based on the relationship between sustainability and educational gamification.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
