Message from the Guest Editor

The current crisis due to the COVID-19 pandemic has affected different business practices around the world and will impact on future approaches to transport infrastructure. The experience to date reveals that users are changing. In cities and urban environments, a reduction in traveled distances and a modal shift to private light transportation mode have been observed. Under such conditions, road managers should modify their approach to both the construction and maintenance of roads. The effects have a range of impacts: they will probably reduce construction activities and encourage maintenance and rehabilitation works; these initiatives will promote environmental responsibility and encourage the development and diffusion of environmentally friendly technologies and policies in order to reduce their environmental impacts. These positions stimulate both industrial competition in seeking technologies ensuring environmentally friendly solutions and political initiatives to promote effective and real results: the evaluation of burdens using quantitative methodologies permits comparisons of equivalent materials/products/procedures and identification of those with less impact.

an Open Access Journal by MDPI

Editor-in-Chief

Applied Science, University of
Ontario Institute of Technology,
Oshawa, ON L1G 0C5, Canada

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
