Message from the Guest Editor

Dear Colleagues,

Signal processing is a significant step for the eloquent restoration and analysis of ill-posed signals which are extremely troubled in nature. Traditional signal processing approaches yield rational answers; however, scheming a refined approach for ideal presentation frequently needs several hits and trials. Today, artificial intelligence is playing an increasingly important role in both image and video signals.

Artificial intelligence, deep learning, and various areas of associated technologies have contributed seriously to research into sustainability. Improved from the conventional machine-learning methods, deep learning methods allow the end-to-end optimization of the whole data-driven pipeline. Deep learning also permits the learning of deep features within the dataset in numerous forms. However, until now, the most effective approaches of deep learning have been within the area of computer science and its associated engineering areas. The application of deep learning for answering environmental issues for sustainability is still incomplete in relation to the demand.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
